

# CreateProcess-01

Close process and thread handles after calling CreateProcess()

Attack Category	<ul style="list-style-type: none"><li>• Denial of Service</li></ul>		
Vulnerability Category	<ul style="list-style-type: none"><li>• Process management</li></ul>		
Software Context	<ul style="list-style-type: none"><li>• Threads and Processes</li></ul>		
Location			
Description	<p>After calling CreateProcess(), ensure that process and thread handles get closed.</p> <p>CreateProcess() and related functions create a new process. A ProcessInformation argument is returned, and this contains handles for the process and thread associated with the new process. Remember to close these process and thread handles; otherwise the system will not be able to clean up after the child process exits. The system will be able to clean up once both the child and parent processes exit, but this may tie up resources longer than necessary.</p>		
APIs	FunctionName		Comments
	CreateProcess		
	CreateProcessA		ANSI implementation
	CreateProcessW		Unicode implementation
	CreateProcessAsUser		
	CreateProcessWithLogonW		
Method of Attack	By repeatedly creating processes and threads that do not get cleaned up, an attacker can eventually force the system into resource exhaustion and lead to a Dos.		
Exception Criteria			
Solution Applicability	Solution Applicability	Solution Description	Solution Efficacy
	Whenever creating a new process.	Close thread and process handles in process	Effective.
